

# Akumina + Microsoft Teams

## Akumina Leverages “Teams-as-a-Canvas” to Drive Innovation & Minimize Context Switching

Akumina’s employee experience software platform delivers customizable, brandable, and easy to manage digital workplace experiences - empowering every member of your workforce with a personalized and relevant experience available on any device, in any language, at any time, and right inside of Microsoft Teams.

Microsoft has established Teams as the predominant collaborative workplace destination in the market – and by adding the power of the Akumina Employee Experience Platform (EXP) to Microsoft Teams, corporations around the globe can deliver rich, context aware and relevant experiences in a personalized Intelligent Activity Stream, a fully-contained modern intranet or a full-blown employee hub directly inside of Teams. This minimizes context switching for users and allowing them to get work done faster.

Powered by Akumina’s strategic partnership with Microsoft and Akumina’s single-page application framework (SPA), corporate communications and HR can easily build and deploy fully branded, highly personalized, and targeted content-centric experiences inside Teams, while allowing power users and content authors to create managed content and deliver it directly inside of the Teams UI, leveraging Akumina’s content management system, AppManager.

Akumina + Teams gives users the ability to take advantage of Akumina’s integration capabilities bringing action-based experiences from leading cloud systems such as Workday, Salesforce.com, ServiceNow and thousands of others directly into each user’s Intelligent Activity Stream, which is delivered via the Teams desktop application, web application and native mobile app.

Change the game for your enterprise and enable your team to easily create and deploy hyper-personalized digital employee experiences with Akumina’s EXP inside of Microsoft Teams.

“Teams is the hub for teamwork. It’s really four things in one. It has chat. It has meetings. It brings together collaboration, using all the richness of Office 365 tools, within that same scaffolding. It’s the business process workflow. That’s what Teams is about. It defies even the category definitions that are there out in the marketplace.”

- Satya Nadella,  
CEO of Microsoft
